

# Walk-Through Flat Barn Parlor System

**FRONT EXIT**

- Cows exit individually when they are done - no waiting for slower cows.
- Fast milking - milk up to 56 cows per hour with 1 person in a double four!
- Provides rapid dairy expansion at 10-20% the cost of a pit parlor.
- Gravity operated - no air rams, hydraulics, or springs to depend on.
- Can use existing barns.
- Increased cow and operator comfort.
- Reduced labor.

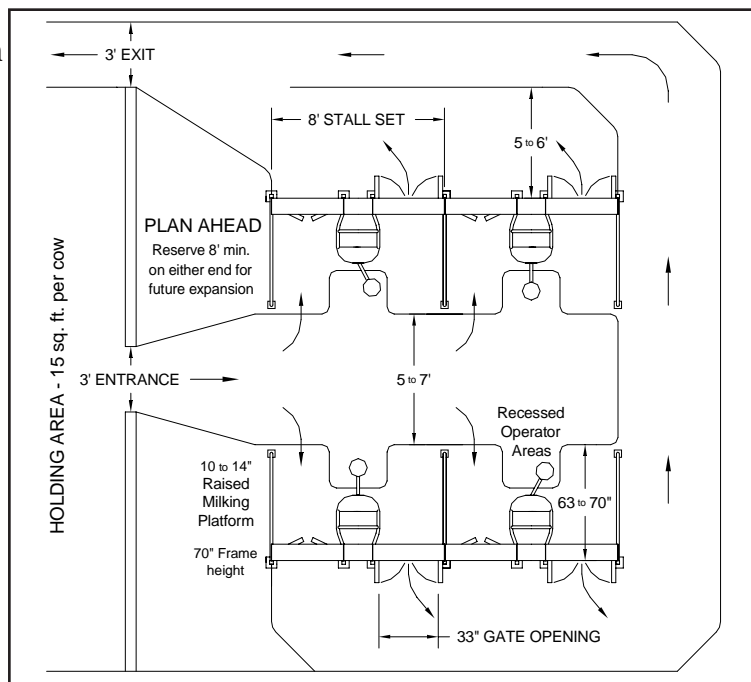

## Designed for operator and cow comfort

As cows enter, their forward motion closes the stall gates. This puts the cow on a raised, 34" wide platform while leaving a 32" x 24" area for the operator. No pushing and shoving to get between cows for milking.

Raising the cow puts her udder within easy reach of the pivoting seat. Seat height is adjustable to provide greater comfort and eliminate deep knee bends.

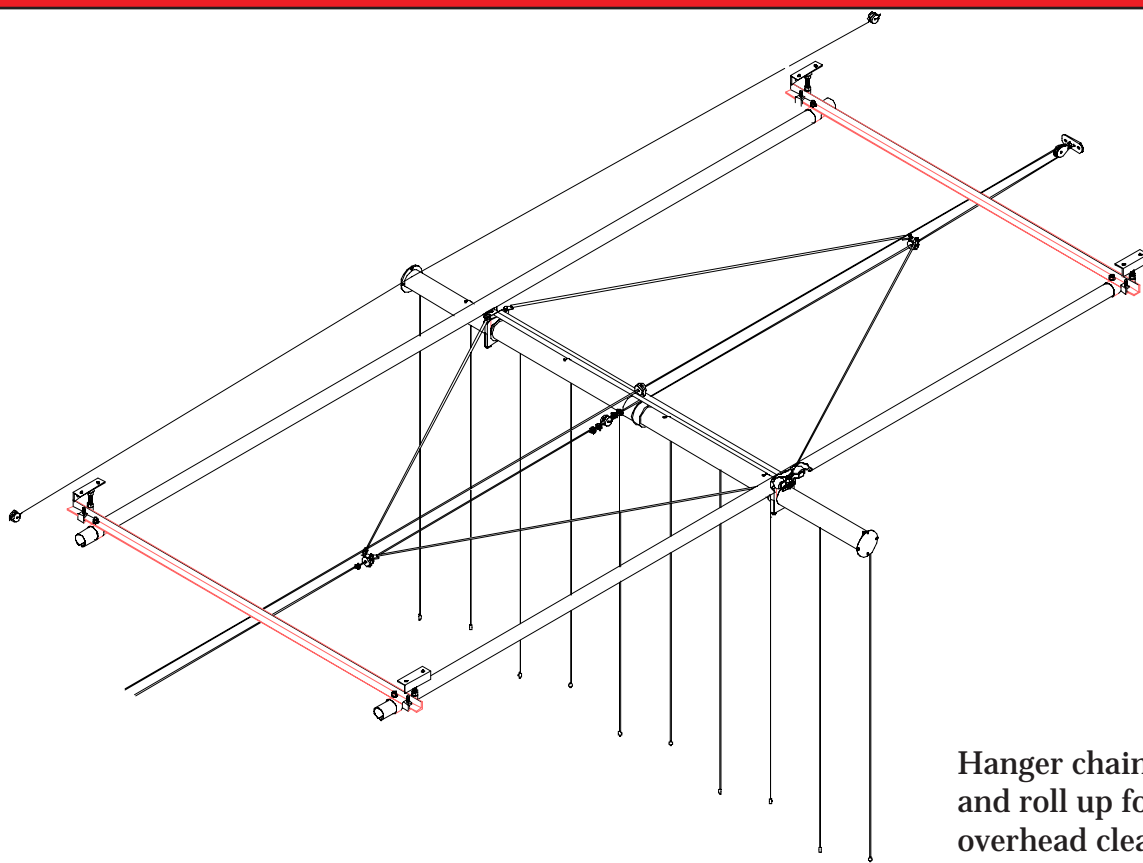

When milking is complete, the operator simply pulls a T-handle to release the cow. Once clear, the gates return by gravity to the ready position for the next cow.

Compatible with most major manufacturers milking equipment. All stalls and partitions are bolted together and anchored to the concrete making it easy to move, replace, or add on to your parlor.

# Roll up Crowd Gate

Hanger chains won't tangle and roll up for easy overhead clearance.

## Save Money without sacrificing quality!

- Affordable alternative to pusher gates
- Innovative, simple design. Patented in the US and Canada.
- Available with manual or electric drive
- Easily installed in any facility up to 31' wide and 100' long.
- No hanging cords.
- Hanging chains rather than heavy gates.
- No cross bars to catch or injure animals.
- Heavy duty construction for years of use.
- Low-voltage electric fencers can be added (not supplied by Agromatic).
