

DairyGrip Cutting Instructions: LENGTH

Step 1: Unroll the extra length you plan to remove so the remaining mat equals your full alley length. Measure and mark the cut line.

Example:
For a 90' alley from a 100' roll, unroll 10' to cut off.

Step 2: Fold the mat back onto itself and clamp it in place to expose the cut line.

Step 3: Using a utility knife, score the line.

Step 4: Cut through the mat and embedded cables with an angle grinder and cutting wheel.

*If needed, finish with a circular saw,
metal saw, or concrete saw.*
